

integrated machine learning

Presenters: Jennifer, Lori, Susana, Shailza

motivation

to test if a machine learning model can
predict a country's future happiness score

tools used

Google Collab, Jupyter notebook, MongoDB, MongoDB Atlas, HTML/CSS, JavaScript, Heroku, VS Code, Machine Learning with SK Learn and Tensor Flow, Flask, Python etc.

brain storming

Which features have the highest correlation to the target happiness score?

GDP per capita, life expectancy and family.

df_out.corr()

	happiness_score	standard_error	gdp_per_capita	Family	life_expectancy	Freedom	government_corruption	Generosity	dystopia_residual
happiness_score	1.000000	-0.177254	0.779171	0.693547	0.734491	0.556414	0.397989	0.168272	0.526343

156 rows x 5 columns

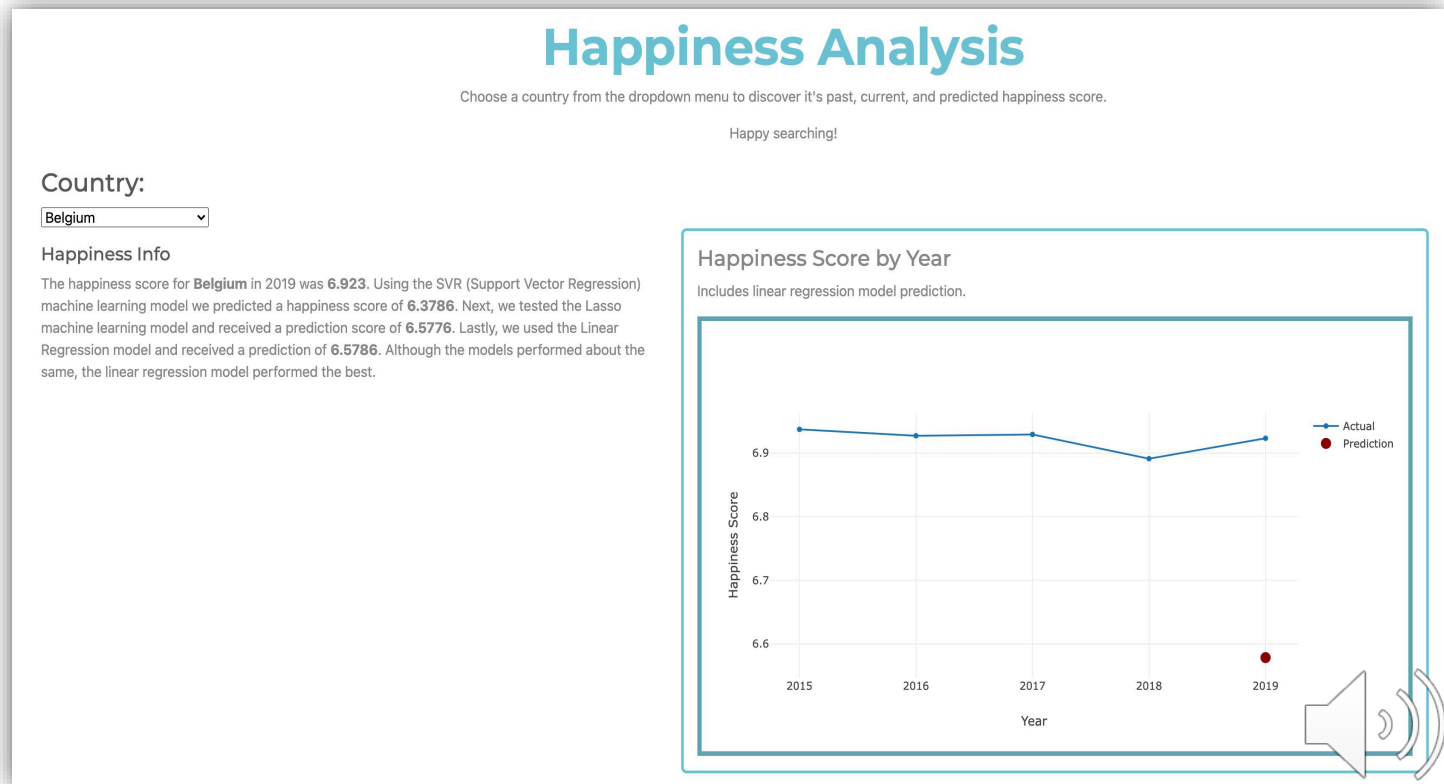

models used for our prediction

SVR, Multiple Variable Linear Regression, and LASSO Regression

webpage design

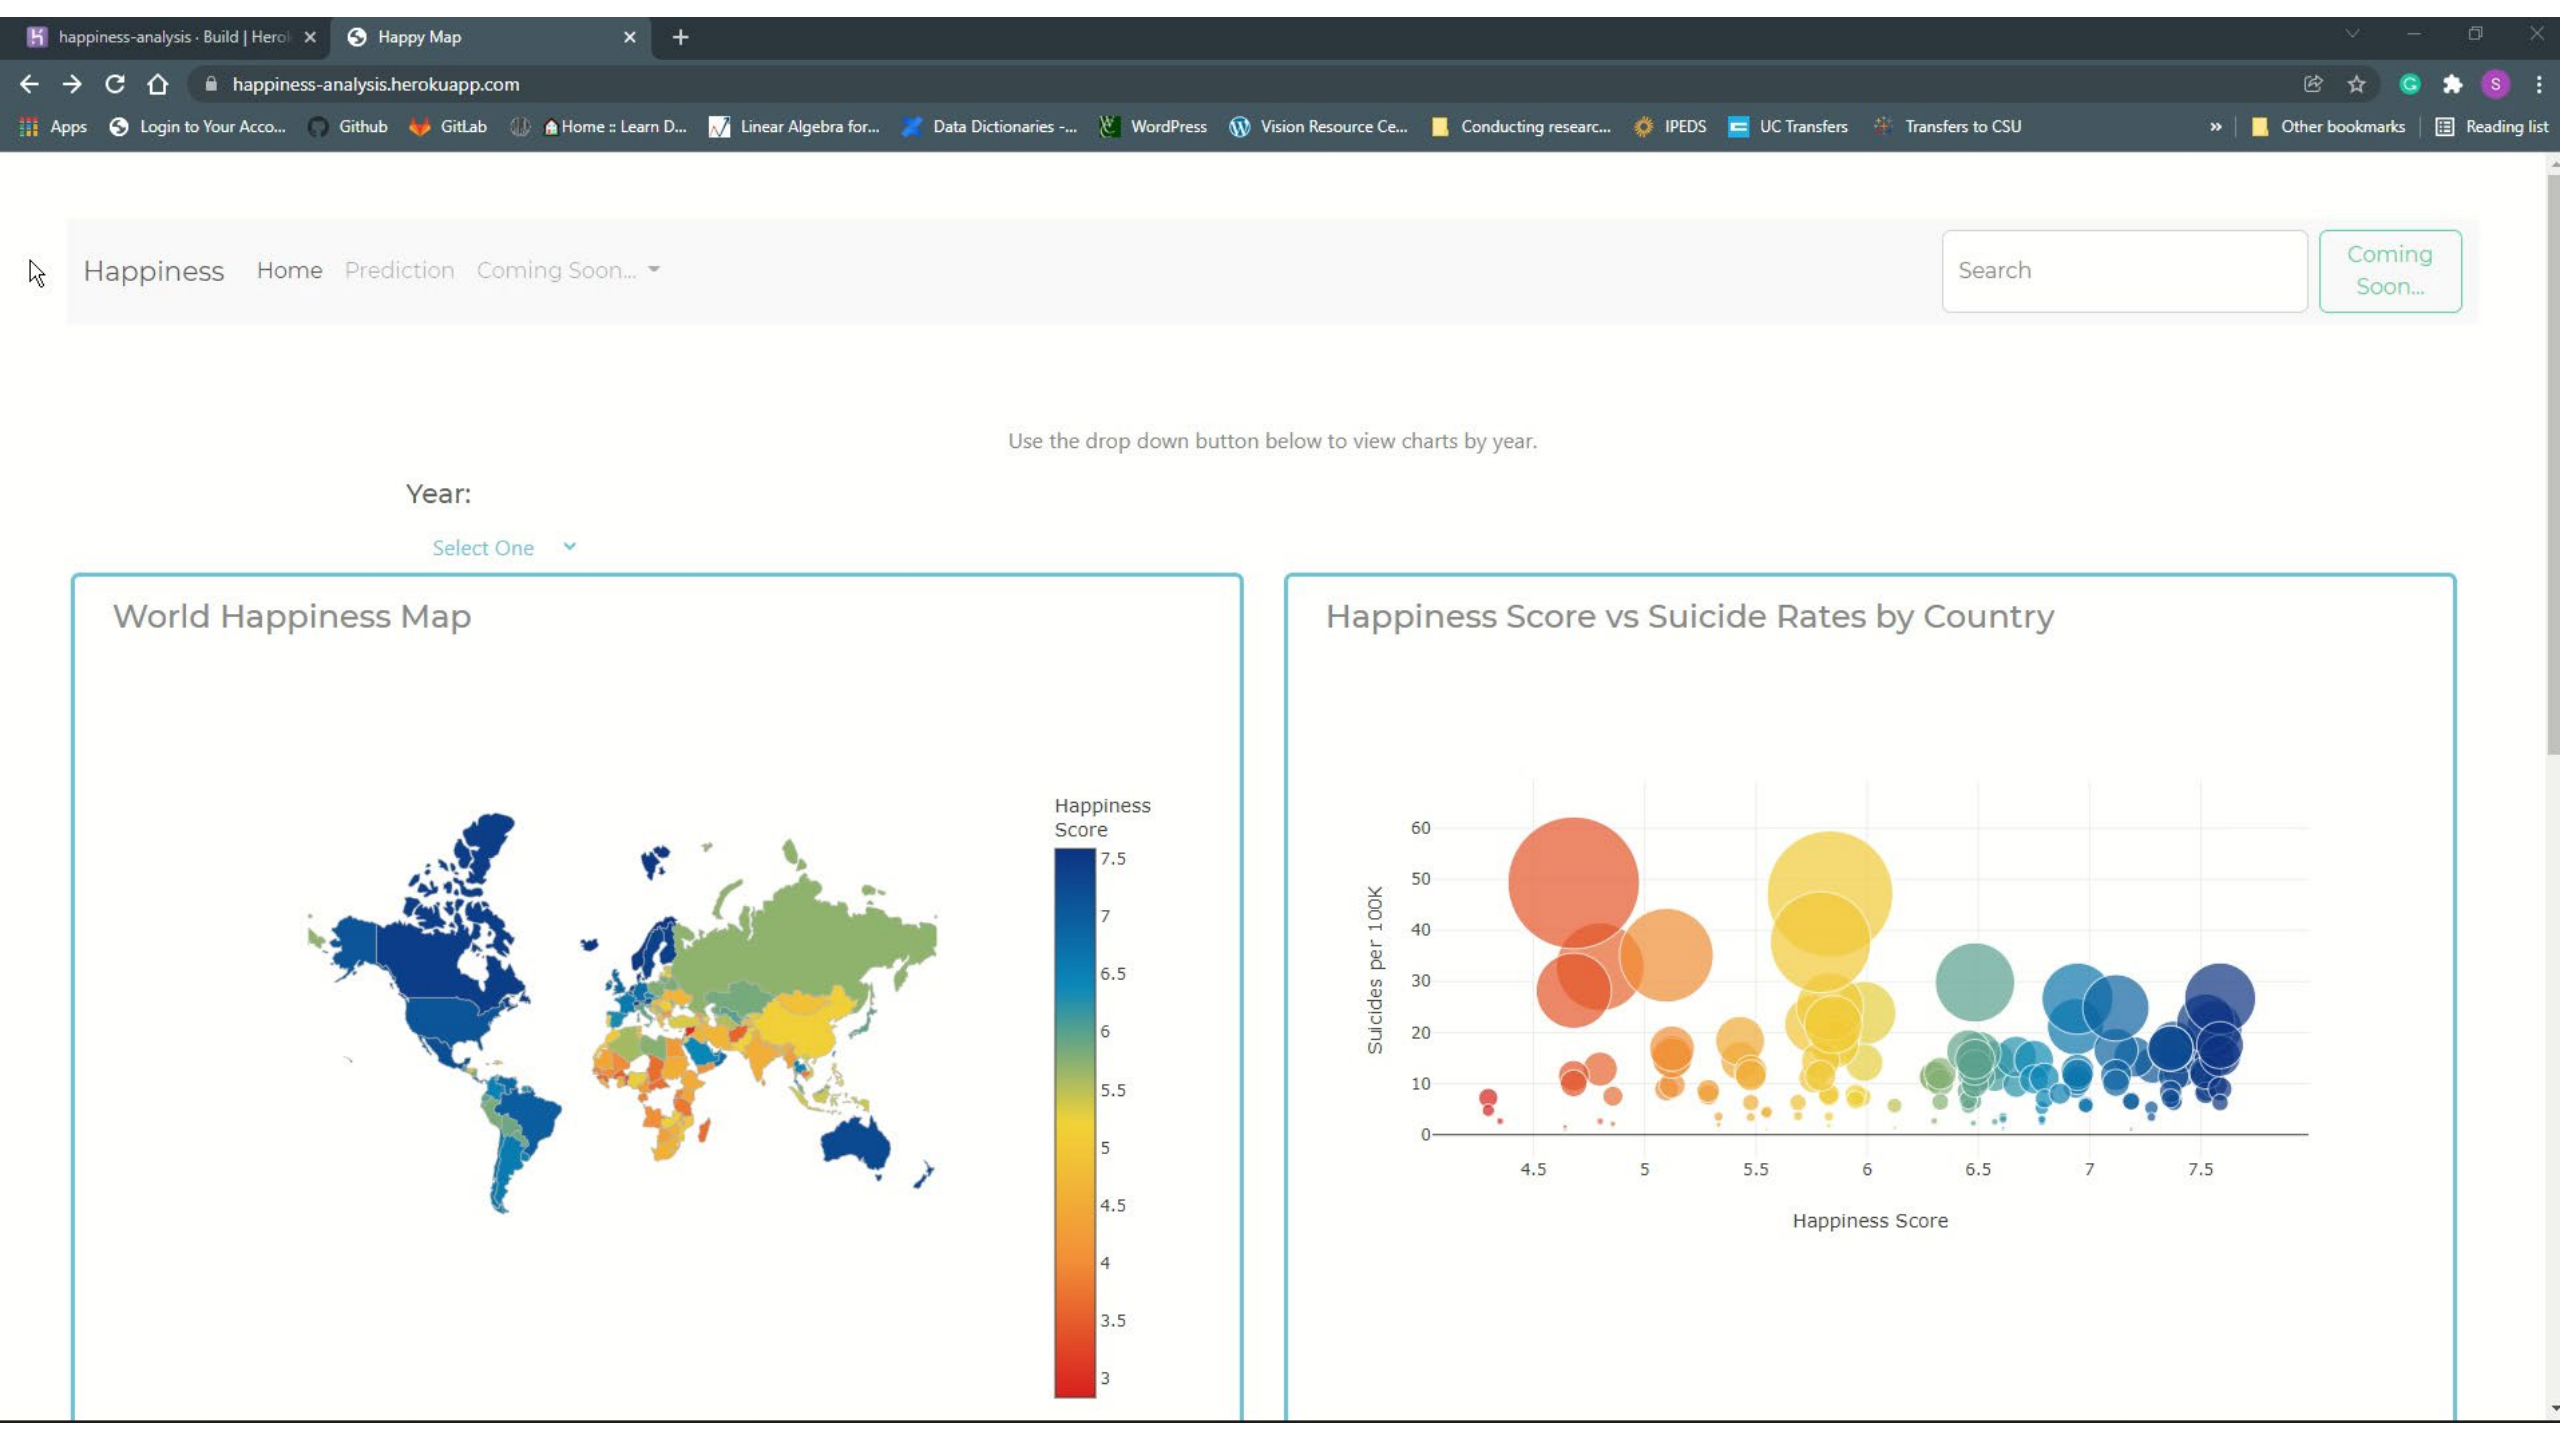

Create an interactive tool to predict a country's happiness score.

heroku deployment Process

- Create repository
- Determine file structure
- Add Procfile
- Create the Requirements.txt file
- Push to the Repo
- Open Heroku
- Create new app
- Connect Heroku and GitHub
- Deploy

thank you
